

## **Hot Wash High Reach Window Cleaning**

If your window cleaner uses a basic "Reach and Wash" system for high level windows, you might have noticed that often the clean quality is not as good as low level windows where a hot wash has been used.

To ensure a much deeper quality clean for high level windows, we've invested in a brand new system which uses Hot Water and has an extendible reach up to 65ft or 5 stories high. The new innovative system is called 'Hot Wash, High reach window cleaning' and, aside from window cleaning usage, it is also very effective for cleaning cladding (on apartments etc.) and building frames (on warehouses).

## Office Clean

Cleaning Services Ireland

---

Crucially, it is also chemical free as the hot water lifts the dirt without detergent so it's much more environmentally friendly than traditional window cleaning methods.
